ANDREW VINSTON D SOUZA

Aspiring SOC Analyst (L1) | SIEM Monitoring, Log Analysis & Detection Validation
Mangaluru, Karnataka, India | +91 97316 48218 | andyydz57@gmail.com
LinkedIn | GitHub | TryHackMe | Portfolio

SUMMARY

Final-year BCA student targeting entry-level SOC and security analyst roles. I built SENTINEL, a personal SOC lab on Wazuh, Ubuntu and Kali, where I configured File Integrity Monitoring, tested a custom detection rule and documented an investigation case. I am comfortable with Linux, TCP/IP, log analysis and Wireshark, and I use Python to parse Wazuh alerts. I keep learning through TryHackMe and the Google Cybersecurity Certificate. Looking for a SOC Analyst (L1), Junior Security Analyst or cybersecurity internship role, with Cloud Security as my longer-term direction.

EDUCATION

Bachelor of Computer Applications (BCA) | St. Aloysius (Deemed to be University), Mangaluru Expected April 2027
CGPA: 7.16/10 (through Semester 4)

CERTIFICATIONS

- **Foundations of Cybersecurity** – Google Cybersecurity Professional Certificate (Coursera), scored 97.42% – June 2026
- **Cyber Security 101 Learning Path** – TryHackMe – July 2026
- **Pre Security Learning Path** – TryHackMe – May 2026
- **Network Defense** – Cisco

In progress: TryHackMe SOC Level 1 Path; remaining courses of the Google Cybersecurity Professional Certificate

TRYHACKME ACHIEVEMENTS

- **Top 4% globally** on TryHackMe – tryhackme.com/p/andyydz57
- Completed hands-on rooms on Nmap, Wireshark, TCPDump, Snort (IDS), Firewall Fundamentals, SIEM, Digital Forensics, OWASP Top 10 and Hydra/John the Ripper

TECHNICAL SKILLS

Security Operations (lab-based): SOC Monitoring, SIEM Monitoring (Wazuh), Log Analysis, File Integrity Monitoring (FIM), Detection Rule Validation, Basic Incident Investigation

Security Tools (hands-on): Wazuh, Wireshark, Nmap, Kali Linux

Security Tools (familiar): Splunk, Snort, Burp Suite, Metasploit, CyberChef

Systems & Networking: Linux (Ubuntu, Kali), Windows, TCP/IP, OSI Model, Network Security (VLANs, ACLs), DHCP, DNS (Cisco Packet Tracer)

Programming & Tools: Python (parsing, JSON, Pytest), Git and GitHub; Java, SQL, JDBC, MariaDB (academic project)
Concepts (foundational): MITRE ATT&CK, Incident Response fundamentals, Digital Forensics

PROJECTS

SENTINEL – SOC Monitoring & Detection Lab | Wazuh, Ubuntu, Kali Linux github.com/andyydz/sentinel-soc-lab

- Built an isolated VirtualBox lab: Wazuh 4.14.8 manager, an Ubuntu 24.04 endpoint running the Wazuh agent, and a Kali Linux VM for controlled testing on a private network.
- Configured real-time File Integrity Monitoring on /home and wrote custom Wazuh rule 100002 (Level 8). Validated controlled file modification, creation and deletion tests against built-in rules 550 (modification), 554 (creation) and 553 (deletion).
- Custom rule 100002 triggered for the modification test but not for file creation, a gap found through testing. Documented investigation CASE-001 with supporting evidence and findings. Planned: false-positive testing and MITRE ATT&CK mapping.

Python SOC Automation Engine | Python 3, JSON, Pytest github.com/andyydz/python-soc-automation

- Wrote a parser that extracts rule ID, severity level, agent name and rule description from Wazuh alert JSON.
- Added input validation (TypeError/ValueError), default values for missing fields and six automated Pytest tests, all passing. Planned: alert triage and reporting.

Bank Secure Network | Cisco Packet Tracer github.com/andyydz/bank-secure-network

- Designed a segmented network with four VLANs, router-on-a-stick routing, centralized DHCP/DNS and ACLs restricting Employee and ATM traffic toward the Admin network.
- Tested the Employee-to-Admin restriction successfully: the ping failed and the ACL deny counter increased. Pending: ATM ACL validation.

Cybersecurity-Writeups | TryHackMe, Linux, SOC github.com/andyydz/Cybersecurity-Writeups

- Public writeups of completed TryHackMe rooms (SIEM, IDS, packet analysis, phishing analysis) covering what I found, what I tried and how it relates to SOC work.

Security Incident & Asset Tracker | Java, JDBC, MariaDB github.com/andyydz/security-incident-asset-tracker

- BCA minor project: Java console application using JDBC and MariaDB to track IT assets and security incidents (severity, Open/Resolved status), modelled on SOC asset and incident workflows.

LANGUAGES & INTERESTS

Languages: English, Hindi | **Interests:** Badminton, Chess, Content Creation
